GRADTRACKER

GradTracker is a tool developed to help ExpandED Schools identify students' progress toward graduation in the elementary, middle school and high school grades. As schools collect and analyze data on student achievement, attendance and behavior, they can identify which students are on track to graduate, closing in on that status, or not on track. Schools use this tool to target tutoring and supports and to redeploy resources to help students at high risk.

Notes: As more data become available, we will amend these metrics. The metrics presented are designed for New York City public schools, but can be adapted for other localities.

ExpandEDSchools by TASC is piloting the use of new measures of student behavior, positive and negative, which we will incorporate in the next edition of the GradTracker tool.
